NO STARCH PRESS STYLE SHEET

No Starch Press uses *The Chicago Manual of Style 15th Ed.* and *Merriam-Webster's Collegiate Dictionary 11th Ed.* Refer to those sources or the book's specific style sheet for all matters not covered below.

Treatment and Styling of Paragraphs

Bulleted lists For a simple collection of items (BulletA, BulletB, BulletC). No bulleted sublists.

Code See "Code Listings" section

Definition lists For terms that require more text (ListHead and ListBody)

Figure captions "Figure 10-4: The menu listing shows a variety of options."; only end with a period if the caption is a full sentence (Caption)

Figure numbering Consecutive within chapters

Figure references Reference by number in text before the figure appears

Headings Up to three levels; title case

Long, run-in heads Sentence case

Numbered lists For a set of consecutive steps (NumListA, NumListB, NumlistC)

Plain lists Non-bulleted, non-numbered, for terms with short descriptions/definitions (List Plain A, B, and C with **EmphasisBold** terms).

Stacked elements Do not stack heads, figures, tables, notes, or text boxes.

Table numbering Consecutive within chapters (i.e., Table 1-1, Table 1-2, etc.)

Table references Reference by number in text before the table appears

Table titles Title case; "Table 14-1: How Fields of Indexed Maps Correspond to Database Parameters"; no full sentences (Table Title)

Treatment and Styling of Text

NOTE For more on styling electronic elements, see the "Code Listings" section of this document. For more on text styles, see the table on page 4.

Abbreviations No periods in abbreviations: PhD, US. No apostrophe for plural abbreviations: BBS; BBSs (pl); BBS's (poss.). See word list for common abbreviations.

Acronyms Spell out upon first mention, with acronym in parentheses. If italicizing as a vocabulary term, italicize the parentheses and acronym: *Internet service provider (ISP)*. Don't introduce acronyms in headings.

Button names Title case, except generic references (the play button); Roman for hypothetical, **EmphasisBold** for user input

The Continue button allows you to continue.

Click the **Continue** button to continue.

Code Literal and straight quotation marks for code quoted in text. **LiteralBold** for typed user input and *LiteralItal* for placeholders. Query typos but do not edit code.

Commands Literal. This includes command-line applications like sudo, make, ls, cd, rm, mkdir, finger, pwd, df, and mv.

Company names Match official usage; pronoun should be *it*. Names beginning with lowercase letters can stand at the beginnings of sentences.

Cross-references For chapters: see Chapter 9; for sections: see "Using Paragraph Styles" on page XX

Email addresses EmphasisItalic

Filenames and File/Directory Paths EmphasisItalic

File types Roman; see word list for common file types

File extensions *EmphasisItalic*; the word *dot* is pronounced

Geographical names Use West Virginia but eastern Europe. Spell out state names (e.g., Severna Park, Maryland).

Icon selections Match interface for case; Roman even if it's user input

To open a new document, click the New Blank Document icon.

To open iTunes, click the iTunes icon.

Initials Close up: H.L. Mencken

Keyboard keys KEYCAP for named keys, no initial cap: ENTER, CTRL-C, ALT, DEL, ESC, SHIFT, TAB. The spacebar should be roman. Use regular text for function and alphanumeric keys: F3, F11, C, S, 5.

Mailing lists and Newsgroups EmphasisItalic

Menus File ▶ Save (MenuArrow character style, numeral 4 in Webdings, no space on either side of the arrow)

Menu selections Title case; Roman for hypothetical, **EmphasisBold** for user input

If you select File > Save As, the Save As dialog will appear.

To save your File, select **File ▶ Save**.

Onscreen display Literal for quotations from code output display

Prepositions In title case, initial cap prepositions of five letters or more: Let's Work Through the Night.

Radio Button and Checkbox selections Sentence case; Roman for hypothetical, **EmphasisBold** for user input

If you check the Enable other users box, you can enable other users.

Select the **Enable other users** radio button to enable other users.

Software names Roman; match manufacturer's usage.

Tools Roman; initial caps: Ellipse tool.

Trademarks Not used in text

URLs *EmphasisItalic*; always include *http://, www* if necessary, and closing slash.

User input EmphasisBold. Use LiteralBold for typed input in code.

Usernames and group names EmphasisItalic

Variables *EmphasisItalic*, including x in software version numbers.

Vocabulary Terms *EmphasisItalic* where term is defined.

Words as words *EmphasisItalic*: "If the word *remove* appears to the right of the driver, you know it has been installed correctly."

Website names Match official usage; Roman. Online magazines should be EmphasisItalic (i.e., Salon)

Window and dialog names Roman, title case: Save As dialog

Any element that is not listed in Table 1-1 should most likely be styled Roman, but NOTE please ask your production editor for clarification if you encounter anything questionable.

Table 1-1: Text Styles

Text element	Template style	Appearance	Examples
Filenames, file extensions, and directory paths	EmphasisItalic	Italic	figure01_01.png .odt usr/local/etc
URLs, URIs, email addresses, mailing lists, newsgroups	EmphasisItalic	Italic	http://www.nostarch.com/ info@nostarch.com
Emphasized words	EmphasisItalic	Italic	You should <i>always</i> do
Usernames, group names	EmphasisItalic	Italic	The user mwlucas
First instance of a technical term where defined	EmphasisItalic	Italic	The kernel is the
Registry keys	Literal	Monospace	
Language and script elements: attributes class names commands events functions keywords methods modules namespaces objects parameters properties types values variables XML and HTML tags etc.	Literal	Monospace	
Placeholder items in syntax	LiteralItal	Monospace italic	hostname="host.example.com"
Placeholders in italic text	(Enclose in angl	e brackets)	http://www. <example>.com</example>
Keyboard accelerators	Кеусар	Small caps	CTRL, ALT, SHIFT
Buttons, when reader is directed to click	EmphasisBold	Boldface	Click OK .
Menus, when reader is directed to select	EmphasisBold and MenuArrow	Boldface with hierarchy arrow	Choose File ▶ Save .
User input, code	LiteralBold	Monospace boldface	

Punctuation

Ampersands (&) Use in proper names only.

Apostrophes and quotation marks Curled (smart) in regular text; straight in code listings and code quoted in running text.

Colons Capitalize the first word of a full sentence when it follows a colon.

Commas Use series comma: We bought eggs, milk, and cheese.

Ellipsis Use spaces as in . . . (do not use the symbol ...). Include a fourth dot when the ellipsis falls at the end of a sentence.

Em dashes Use a true em dash, with no spaces: i.e., word—word.

En dashes Use for ranges in parentheticals and tables only; use with open compounds such as pseudo-assembly code and DOCSIS 1.1-certified.

Titles of Works

Book titles EmphasisItalic: The Lion, the Witch and the Wardrobe

Electronic publications (such as newsletters and magazines) *EmphasisItalic*: Salon

Magazine names EmphasisItalic: Wired

Magazine articles Quotation marks: "The Sexiest Geeks of 2007"

Movie titles EmphasisItalic: Napoleon Dynamite

Newspaper names EmphasisItalic: The New York Times

Newspaper articles Quotation marks: "UN Warning"

TV shows *EmphasisItalic* for show/series name: *Buffy the Vampire Slayer*;

quotation marks for episode titles: "Hush"

NOTE For more on treatment of work titles, see the "Citation Guidelines" section of this document.

Numbers, Dates, Math, and Measurements

Numbers

Spell out numbers one through nine. Use numerals for 10 and greater. The four exceptions are:

- For measurements, always use numerals.
- Where numbers one through nine and 10 and greater appear in close proximity and in the same context, use numerals for all.
- For ranges, in running text: one to four, 3 to 12, 15 to 20; in parentheticals and tables: 1-4, 3-12, 15-20
- If a sentence begins with 10 or greater, spell out or edit to avoid.

Phone numbers

Use periods in phone numbers: 1.800.555.1212

Dates and Time

Dates Month Year with no comma (March 1982) or Month Day, Year (September 5, 1974)

Decades '90s or 1990s **Centuries** 21st century

Eras KEYCAP style, no periods: 201 BC, 2 AD

AM and PM KEYCAP style, no periods: 10 AM, 3:15 PM

Mathematical Equations

Add a single space before and after operands: 2 + 2 = 4

Variables

Variables in standard mathematical formulas should not be italicized:

$$x + y = z$$

When n is standing in for the word number, it should be italicized:

$$(n+1)n$$

Variables (placeholders) in code are italicized:

<body color=colornumber>

Fractions

- Words in running text (i.e., two-thirds).
- If the fraction is presented with a whole number, it should appear as numerals with case fractions wherever possible: 8 ½.
- Decimal notation should be used in scientific or technical text. Add a zero before the decimal: 0.75.

Measurements

Abbreviate all units of measurement (except English) when given as a quantity, and leave a space between the value and the unit:

- 3 mm, 3 inches, 3 miles, 3 MHz, 3 feet
- Bit and byte sizes and speeds should not have a space: 6KB, 6Kbps.
- When bits and bytes are on their own, they should be spelled out: 6-bit cable, 6 bytes.

Code Listings

Code listings Use CodeA/CodeB/CodeC or CodeSingle. Use **LiteralBold** for typed user input and *LiteralItal* for placeholders. Query typos but do not edit code.

Code listing numbering (optional) Consecutive within chapters (Listing 1-1, Listing 1-2, and so on). Code listings are usually not numbered. If appropriate (e.g., when the running text will reference them), you may number listings as you would number figures.

Code listing captions "Listing 10-4: The menu listing shows a variety of options."; end with a period only if the caption is a full sentence (Listing paragraph style).

Code listing references Reference by number in text before the listing appears

Tabs Use four spaces rather than a true tab.

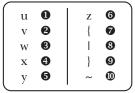

Line length Standard code line length is 78 characters.

Ellipses Ellipses (three dots) in code should not have spaces. (Make sure Word doesn't autoformat the dots into an ellipsis symbol.)

Ellipsis in the...code listing.

Styling Code

Use **Q260** . . . (style: Wingdings) to call out specific elements in a line of code that you will refer to and/or describe within the text. The figure shows the characters that correspond to the numbers in the Wingdings font.

Put the number balls in front of the element to which you will refer, with no space after them. Use only numbers 1–10 in any one code listing. For example, to point out the tags that open and close a link in HTML:

1 Google <a>

Use LiteralBold to highlight changes in code or large parts of code that you will call out in the text. For example, to point out that you had changed the link from No Starch to Google:

No Starch Google

Use *LiteralItal* for variables contained in code. For example, if the reader is to use his TFTP IP address and config name:

tftp -i TFTP_IP GET CONFIG_NAME

Use Literal when referring to machine output, commands, functions, or objects in running text. Here are some examples:

- Use the GET command to access the file.
- Within a few seconds the phrase Press any key to stop auto-boot will appear.
- You must use an SNMP agent to access the object cmHybridMode.

Use LiteralBold for typed user input in running text. Here are some examples:

- Enter the password dlink.
- Type run: program Windows into the Terminal.

Citation Guidelines

For recommended reading or other simple references that don't require a true citation, just give as much information as the reader would need to find the piece (i.e., title, author, and publisher). For example, "A great resource on this topic is Randall Hyde's *The Art of Assembly Language* (No Starch Press, 2003)." Long URLs for online pieces may be footnoted for easier reading.

As a general rule, follow *The Chicago Manual of Style* for citation formats. Unless you have a large number of citations, or your topic requires more precise scientific citation, you can use the following method.

If you don't feel that this method will fit your content, discuss alternatives with your editor(s).

Bibliography and Footnotes

If you want to include a bibliography at the back of the book, the entries should appear as follows, alphabetized by author's last name:

Surname, Given Name. *Title of Work: Subtitle of Work.* Location: Publisher, YYYY.

And then you can put a footnote in the text where the reference appears:

¹ Surname, *Short Title*, pp.

Or, if you don't want to have a bibliography, use a more complete footnote:

¹ Given Name Surname, *Title of Work* (Location: Publisher, YYYY), pp.

Elements to Include

Whichever citation style you use, these pieces of information should always be included:

- Author (and/or editor, translator, etc.)
- Title (and usually subtitle)
- Publication date

Also include:

- For BOOKS: Location and publisher
- For ARTICLES: Journal name, volume, year, page no., and issue
- For ONLINE pieces: Indicate that the piece was published online; list URL (and access date if appropriate)

Long, complete works should be set in italics (i.e., books, journals and magazines, online magazines, musical albums, feature-length films, TV series, newspapers, and so on).

Shorter or partial works should be set roman, in quotation marks (i.e., chapters, articles, online articles, songs, TV series episodes, poems, and so on).

WORD LIST

Symbols and Keys angle brackets (not just brackets, unless the term has been introduced and it's clear; <>) ALT key ALT-N at sign (@) backslash (\) BACKSPACE key backtick (not backstroke, `) braces or curly brackets (not curly braces; not just brackets, unless the term has been introduced and it's clear; { }) button bar CAPS LOCK key caret (^) Command key (\Re ; lowercase z in Wingdings font; Mac) CONTROL key (Mac) <CR><LF> (carriage return, line feed) CTRL key (Windows) CTRL-ALT-DELETE CTRL-N curly brackets or braces (not curly braces; not just brackets, unless the term has been introduced and it's clear; { })

outbox	QuickTime
P	R
packet switch networks	RAM (random-access memory);
pagefile	a RAM
Paint Shop Pro	random-access (a)
pair-to-pair (a)	README file
palmtop	read only (n); read-only (a)
parallel port	read/write
part-time (a)	real time (n); real-time (a)
Pascal	record keeping (n); record-
passphrase	keeping (a)
password protect (v); password-	re-create
protected (a)	redirection
patchlevel	re-enter
pathname	reference page (or man page)
pattern-matching (a) PC-compatible	remote-access server

11 1 ()	-1 -1
removable media (a)	snail mail
rename	snap to grid
resell	SOAP (Simple Object Access
rich text	Protocol); a SOAP
right-click (n, v)	sound card
right-hand (a)	source code
rm	spacebar
rollback (n); roll back (v)	spam
rootkit	spellcheck; spellchecker
RTF (Rich Text Format); an RTF;	split screen
.rtf	SSH (Secure Shell); an SSH
rulebase	SSL (Secure Sockets Layer); an SSL
ruleset	standalone
runlevel	start up (v); startup (a)
runtime (n, a)	startup file
(11, 4)	status bar
•	
S	step (as in <i>step 1</i> , <i>step 2</i> , and so on)
Samba	stdin (standard input)
SAX (Simple API for XML); a SAX	stdout (standard output)
screen dump	stylesheet
screensaver	subdevice
screenshot	subprocess
scroll bar	sudo
SCSI (small computer system	superblock
interface); a SCSI	superuser
secondhand (a)	SUSE Linux
securelevel (in Linux)	swapfile
sed scripts	swapspace
semipermanent	sync
Sendmail	.sys (system file)
	system administrator (sysadmin okay
server-dependent (a)	for informal usage/books)
server side (n); server-side (a)	system-wide (a)
servlet	
setup (n, a); set up (v)	T
SGML (Standard Generalized	
Markup Language); an SGML;	10-baseT
.sgml	T1; aT1
shell (lowercase even in shell name;	takeover (n); take over (v)
e.g., Bourne shell)	tarball
shortcut	taskbar
shutdown (n); shut down (v)	TB (terabyte)
single-precision (a)	TCP (transmission control
single quote	protocol); a TCP
site map	TCP/IP (transmission control
Smalltalk	protocol/Internet protocol);
SMP (symmetric multiprocessing);	a TCP/IP
an SMP	telnet, telnetting (v)
	, 0 (1)

$T_{E}X$; $a T_{E}X$; .tex	versus (in text); vs. (in headings
text box	and tables); v. (for legal cases)
text-input mode	vice versa
thread pooling (n)	video card (preferred to graphics
time-sharing process	card)
timestamp	videogame
time zone	voicemail
title bar	VoiceXML
title button	VRML (virtual reality markup
toolbar	language); a VRML; .wrl
toolbox	VS.NET; a VS.NET
tool tip	
top-level (a)	W
touchup (a)	
toward	WAN (wide area network); a WAN
trade-off (n)	warez
Trojan horse	washout (n, a); wash out (v)
troubleshooting (n, a, v)	web browser
TSR (terminate and stay resident);	web client
a TSR	webmaster
turnaround (n, a); turn around (v)	web page
.txt (text file)	web server
type (not type in)	website
71 \ 71 /	Web, the (n)
	white pages
11	
U	whitespace
United States (n); US (a); a US	whitespace wildcard
United States (n); US (a); a US Unix (generic); Unix-based (a);	whitespace
United States (n); US (a); a US	whitespace wildcard wireframe view worldwide
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked	whitespace wildcard wireframe view
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a)	whitespace wildcard wireframe view worldwide
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked	whitespace wildcard wireframe view worldwide WORM (write-once read-many);
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX uppercase	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM worst case (n); worst-case (a)
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX uppercase upper-left corner	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM worst case (n); worst-case (a) writable
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX uppercase upper-left corner UPS (universal power supply);	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM worst case (n); worst-case (a) writable WWW (World Wide Web); a WWW
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX uppercase upper-left corner UPS (universal power supply); UPSs; a UPS	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM worst case (n); worst-case (a) writable WWW (World Wide Web); a WWW W3C (World Wide Web Consor-
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX uppercase upper-left corner UPS (universal power supply); UPSs; a UPS up to date (n); up-to-date (a)	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM worst case (n); worst-case (a) writable WWW (World Wide Web); a WWW W3C (World Wide Web Consortium); a W3C
United States (n); US (a); a US Unix (generic); Unix-based (a); Unix-type (a); Unix-like (a) UNIX (only when trademarked from AT&T); a UNIX uppercase upper-left corner UPS (universal power supply); UPSs; a UPS up to date (n); up-to-date (a) URL (uniform resource locator);	whitespace wildcard wireframe view worldwide WORM (write-once read-many); a WORM worst case (n); worst-case (a) writable WWW (World Wide Web); a WWW W3C (World Wide Web Consortium); a W3C
